

Cucumber & BDD (Continued)

- **Regular Expressions** - `[a-zA-Z]{1,}` , `[\"]*` and `.*`
 - Demonstrate `[a-zA-Z]{1,}`
 - Right click on the 'bcPack' and create a new Feature File say 'softwaretester.feature' - [Click here for scenarios](#)
 - Implement step definitions for the above feature steps:
 - Optimize the created step definitions by parameterizing the tests
 - Provide circular brackets around the above expression
 - Represent the words in " " and update the above expression with \"
 - Demonstrate `[\"]*` and `.*` in the same above example
 - Using **Background**
 - Open the earlier created 'search.feature' and move the common step under the Background - [Click here for updated scenarios](#)
 - Generating **HTML Report**
 - Provide the below statement in Runner Class, to generate an html report
 - `@CucumberOptions(plugin={"html:target/cucumber_html_report"})`
-
