

Selenium WebDriver - Handling Calendar

Selecting a Date from Calendar - Follow the below steps for selecting a date from Calendar:

- Demonstrate Calendar functionality at <http://omayo.blogspot.com/p/page6.html> manually
 - Create a new Maven Project, write the Selenium code to browse <http://omayo.blogspot.com/p/page6.html> in Chrome Browser and open the calendar in the page - [Demonstrate here](#)
 - Demonstrate a program to convert the integers stored as strings to int data type and perform operations - [Demonstrate here](#)
 - Demonstrate retrieving the day, month and year from the string format date text - [Demonstrate here](#)
 - Demonstrate a program which converts a month to number - [Demonstrate here](#)
 - Update the above Selenium code to navigate to the year, and then to the month and then select date - [Demonstrate here](#)
 - Demonstrate whether the User is able to select the previous date in the Calendar say 15th August 2007
 - Demonstrate whether the User is able to select the upcoming date in the Calendar say 15th August 2025
 - Note:
 - There are different types of Date fields in the market and this logic only works with the date field demonstrated in this example
 - For other types of Date fields, we may have to tweak the program logic to get the desired result.
-
