

Cucumber & BDD (Continued)

- Providing a description into a Feature File
 - Description is optional but recommended
 - Example - Copy the description from [here](#) and paste into the Feature File
 - Understanding **Scenario Outline**
 - Create a new feature file say 'omayologin.feature' under 'bcPack' package
 - Write a login scenario using the keywords 'Scenario Outline' and '**Examples**' as shown [here](#)
 - Create a step definition class say 'OmayoLogin' under 'bcPack' package
 - Create step definitions for all the steps in feature file and write Selenium Code - [View code here](#)
 - Run all the Feature Files in the Project using Runner class and see the Passing results
 - Provide wrong expected login status and the scenario should fail on running
 - Executing individual Feature Files
 - Open the required feature file
 - Right click anywhere inside the Feature File and select 'Run As' > 'Cucumber Feature' option
 - Observe that only one Feature File will be executed
-
