Selenium WebDriver - sendKeys()

- sendKeys() command in Selenium WebDriver can be used for multiple purposes:
- The following are the different programs demonstrating its usage:
  - **Textbox fields**
    - sendKeys() can be used for entering text into the text box fields - Demonstrate here
  - **Passsword fields**
    - sendKeys() can be used for entering text into the password fields - Demonstrate here
  - **Textarea fields**
    - sendKeys() can be used for entering text into the text area fields - Demonstrate here
  - **Dropdown fields**
    - sendKeys() can be used for selecting options in the drop down fields - Demonstrate here
  - **Multi-selection box fields**
    - sendKeys() can be used for selecting an option in the multi-selection box feild - Demonstrate here
  - **Upload Files**
    - sendKeys() can be used to upload a file - Demonstrate here
      - Uploading the files from a workspace folder instead of local folder
      - It may not always be possible to upload the files using this approach
  - **Handling Keyboard Keys**
    - sendKeys() can be used for handling the keyboard keys - Demonstrate here
      - Keys class and its predefined variables needs be used for this purpose
      - Using chord method for performing the combination of keys (Simulate Ctrl+Z) - Demonstrate here
